

## The properties of concrete

The surface textures are subject to natural variation. Small pores, striations, tiny holes and colour deviations or fine shrinkage cracks are not cause for complaint but instead – like the knotholes and annual rings of wood – are with giving the material a distinctive appearance. Every concrete piece is therefore unique.

### Additional information:

- Available only from specialised dealers – garden architects, designers or kitchen studio. International shipping
- Please follow the care instructions. The concrete kitchen is waterproofed and therefore not resistant to acids. Always use a cutting board and clean dirty surfaces promptly.
- Weather: designed for the outdoors – essentially water-, weather- and frost-resistant. Nevertheless, we recommend that you cover your kitchen (available from dade) or place it under a roofed area.
- Alterations of the product based on customer requests are an option; custom-designed Outdoor Kitchens are also available. Dade-design specialises in manufacturing customised concrete installations and works together with leading home design specialists.
- The General Terms and Conditions of Dade Design apply (contract for work and materials + care instructions)

# Concrete Outdoors

Welcoming friends into your garden means sharing and enjoying the fine things of life together. Gourmets love sophisticated cuisine even in the outdoors. Well thought out in terms of aesthetics and functionality. Dade-Design have created the Outdoor Kitchen to meet the very highest of user expectations.

## the\_concrete

### Kitchen module

The clear focus here is the cooking experience. the\_concrete by dade-design is a fully-equipped kitchen with a water supply, sink, stovetop/grill, refrigerator, waste container and plenty of storage space for cooking utensils in a slide-out trolley with working platform made from solid teak.

### BBQ module

Grilling is synonymous with stylish outdoor cuisine. Customers can choose from top-quality BBQ modules with premium power from renowned manufacturers including Beefeater, Firemagic and Lynx.

### Fire module

Next to safe and pleasurable cooking, an open fire offers the perfect atmosphere - a must for any enchanting backyard entertainment. There is plenty of room beneath the adjustable grilling grate to store the firewood in a safe dry place.

# Functional in every detail

In creating the kitchen, designer Anna von Heyl showed a love for detail combined with a thought for optimal functionality. The combination of materials including concrete and teak creates a pleasant feel and is perfectly suited for the outdoors. An ideal spot for meeting up with guests and hold a conversation.

### Cooking

Cooking is a pleasure with the high-quality induction stove that is ideal for the outdoors as well as a grill with splashguard made by the Belgian specialist Induplus+. A gas-powered grilltop can be built in as an alternative option.

### Sink

The sink is flush-mounted, has a retractable faucet and can be covered, making room for the two cutting boards (important features, since you should never cut on the concrete surface itself). The sink can be hard plumbed into the cold water supply or in its simplest form connected via a garden hose.. The boiler within the kitchen itself serves to provide hot water.

### Trolley

As a mobile component, the trolley is always just where you need it. Made with pure teak (or optionally from Corian), it can be moved sideways out of the kitchen. Flipped open, it provides additional workspace. Cutlery, napkins and cooking utensils can be stored in a flat drawer, while cooking pans, pasta pots and stock pots or dishes fit into the taller drawer.

### Refrigerator

With a 90 litre storage capacity, the quality outdoor refrigerator is ideal for storing drinks to be served at just the right temperature. There is space for both champagne and perfectly chilled beers. A fold-out waste container is built in next to the refrigerator.

# Technical info

- |                       |   |
|-----------------------|---|
| Dimensions:           | 950mm x 2000mm (pulled out 3000mm), height 950mm / weight: 700kg  |
| Electricity/gas:      | the_concrete is self-sufficiently operated using gas or electricity (220V).   |
| Required connections: | cold water + electricity; all connections should be set up by a specialist.   |
| Wastewater:           | drainage system (the_concrete is also available without the sink)   |
| Ground surface:       | level ground (e.g. tiled floor). Can be adjusted +/-20mm suitable for the site conditions.  |
| Assembly:             | Module is delivered assembled as a single unit. Requires a crane with 4 load-bearing belts that can be easily anchored with 4 braces. See separate set-up instructions. |
