

wave – bathing in concrete

With the *Wave* collection from the Austrian designer, Philipp Bruni, we have extended the boundaries of possibilities form cast concrete. A sensually shaped freeform surface, which experts considered for impossible just 5 years ago, has now been realised. *Wave* combines precision edges and perfectly executed surfaces free of visible pores.

The designs of *Wave* bathtubs and sinks are available in two formats:

Wave – **A freestanding shell that appears to float.**

Wave_Cubed – Giving the **impression of having been sculptured from a solid block.**

Wave Line – You can get all models with black detail line running along its axis to emphasise the baths super curves.

Whether a consistent continuation of your concrete house or as an exciting contrast in your Altbau-style apartment, a Dade concrete bathtub will always be an attractive element in your home. You will find all of the images for this collection as well as further information about the design process for your **custom planned concrete bathtub** at www.dade-design.com/concrete-bathtubs.
