

dade ELEMENT concrete washbasin collection

The dade ELEMENT collection was designed by the dade architects and is intended to fit modern bathrooms – the straight-lined concrete washbasins are particularly suited for wall mounted taps or high-profile taps. The flush edges of the seamless basin made from dade ROC, an ultra high performance fiber reinforced concrete, give it a proper finish. The counter top basin fits perfectly with the dade ELINA or dade MILANO washstand units and is available in widths of 60, 90 and 120cm.

Add on board	optional
Tolerance	± 3mm
Material	dade ROC high performance concrete with fibres
Drain valve	included, folding mechanism, chromed brass
Connection	Siphon outlet, pipe 40mm

The properties of concrete

The surface appearance is subject to natural variation. Small pores and shrinking cracks, streaking, tiny cavities and colour deviations are no reason for complaint but belong – like knotholes and annual rings in wood – to the unique appearance of the material. Every concrete piece is unique.

Planning Fundamentals

Colours	The concrete can be coloured with pigments. Surcharge 10%. Common colours are anthracite and beige.
Surfaces	Smooth (standard), diamond, terrazzo, board formwork etc. (for more options see www.dade-design.com)
Product changes	Each concrete washbasin can also be produced in other dimensions.
Maintenance	Please note our maintenance instructions
